

The High Quality Scan

Ultra High resolution
High color Reproducibility
High speed

PIGMALION SCANNER

→ Ultra High resolution

We provide high-end scanning and digitization services with the World's highest resolution of 1400dpi (or even more), our scanner realizes image quality and color precision incomparable with any other scanning or digital camera technologies to the extent that it requires no post-scanning adjustments.

→ High color Reproducibility

The color Reproducibility is extremely high with our scanner. It shows color precision is less than 1.2 based on IT8 chart. Because the spatial distribution of the light source is one of the most important factors that affects the quality and appearance of the image, our light sources are developed with Kyoto university.

→ High speed

First of all, we could scan much more quick than your assumption. We scan large Byobu (60 × 160 inch) less than 40 minutes with 600dpi. Including setting time, it is faster than digital camera. Further more, image processing time is shorter by less distortion because adjustment (based on high color reproducibility) time is very short by LED light source.
